Representative meeting at Elastocon

Group picture from an appreciated guided tour at the Borås Zoo.

Every third year we invite our representatives to Elastocon.

During this meeting we talked about the importance to test according to the requirements in the international standards. We also talked about our instruments and we had hands-on demonstrations in our laboratory, so that our representatives could get to know our instruments even more and hence

also can assist you, our customers better.

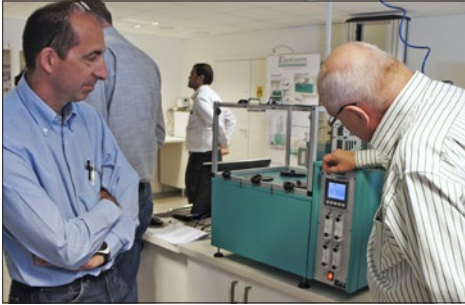

This time we had the pleasure to welcome representatives from app. 24 countries, from Europe, Asia and South Africa. Unfortunately everybody isn't visible in the photo above.

We at Elastocon are very grateful that so many took time to visit us, and think we had a lovely time together!

Elastocon manufactures instruments for testing of rubber and plastic materials

- Specimen preparation
- Ageing ovens
- Stress relaxation and creep
- Low temperature testing
- Windscreen fogging
- Computerised testing
- Electrical tests
- Custom built instruments
- Calibration service

Pictures from our representative meeting at Elastocon September 8–10th 2015

Mr Göran Spetz to the right demonstrates a cell oven for relaxation to Mr Frederic Chaminant, our french representative.

Mrs Anna Anderzén instructs a group of representatives: Mr Paul Duveen from South Africa, Mr Christian Thonauer from Austria, Mr Daniel Langa from Romania and Mr Byung Shik, Kim from South Korea.

Our dutch representative Mr Bart de Wit filling ethanol into the combined instrument for low temperature testing.

Mrs Ann-Cathrine Magnå demonstrates the Elastocon TR Tester, ET 01, in the combined instrument, which also includes a Gehman Tester, ET 02, and a Brittleness Tester, ET 05.

Testing Low Temperature Compression Set, with the EV 09 rig and the EC 10 software: Mr Y.S. Sohn from South Korea, Mr Christian Thonauer from Austria, Mr Brian Robson from the UK, Mr Daniel Langa from Romania, Mrs Pia Campana from Italy and Mr S. Bhagirath from India.

Mrs Anna Anderzén shows the ALE-test rig for Mrs Pia Campana, Mr Daniel Langa, Mr Paul Duveen and Mr Christian Thonauer.

Customer visits in Turkey

The customer visits included the Fiat Tofaş plant in Bursa.

Employees at Tekla and to the far right Cetin Bebitoglu, our Turkish agent.

First week of June I spent together with our Turkish agent.

We went around the area of Istanbul and Bursa to visit both already existing customers and new customers.

I had the privilege to meet many nice and well educated customers and also see some of their laboratories. A very interesting week for me, and hopefully also for the customers.

Anna Anderzén

Our international exhibitions in 2015

Plast 2015 in Milan took place in beginning of May.

Mrs. Anna Anderzén was there together with our Italian distributor, DGTS, at their well visited stand.

Elastocon's contribution was our newest addition to stress relaxation tests, ALE-test, which is a rig with liquid exchange and aeration.

The ALE-test attracted most interest among the sub suppliers to the automotive industry and customers that already performs relaxation tests, just as expected.

The DKT 2015/IRC 2015 held in Nuremberg in Germany took place in the end of June and beginning of July.

As in Milan, Elastocon was present to show our newest relaxation addition, the ALE-test rig, together with our german distributor Richard Hess MBV GmbH.

Several existing and new customers showed great interest in the ALE-test rig.

The ALE-test rig with a control box that controls the new functions, and to the far right our cell oven, EB 21, with four cells with individual temperatures.

Installation in China

In mid-August, I installed a relaxation system at Anhui Zhongding Sealing Parts in Ningguo.

Ningguo is a “small” city of 380 000 inhabitants in Anhui district about 300 km west of Shanghai. The city has no airport so we had to drive 3.5 hours from Hangzhou, a bigger city with 2.5 million inhabitants.

Fortunately, I had one of our representatives in China, Jim from Golden Land Technology Ltd. with me, who accounted for testing, guiding and interpretation, when required.

The customer manufactures seals and has a very well equipped laboratory with all possible instruments for physical testing and chemical analysis, including one of our Gehman instruments.

The one in charge of relaxation was named Ellen and spoke English, so we could understand each other. She was also very quick to learn and understand how the system worked.

Göran Spetz

Elastocon also offers worldwide calibration and polymer testing commissioned by customers, e.g. stress relaxation, estimation of life time, low temperature tests etc.
